### **DETAILED ACTION**

### Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 9/18/2007 has been entered.

#### Election/Restrictions

2. Applicant's election with traverse of Group I, claims 14-27 and 30-33 in the reply filed on 3/3/2008 is acknowledged, however, there is no ground(s) for the Applicant's traversal.

The requirement is still deemed proper and is therefore made FINAL.

## Claim Rejections - 35 USC § 112

3. Claim 15 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not clear what exactly the limitation "roller is a single piece component" is referring to. Applicant's disclosure, including Figure 1, identifies

element 10 as a roller made of a plurality of pieces/components (12, 14, 16 and 20). It is unclear how the roller 10 can be made of a single piece component.

# Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 14-16, 18-25, 27, and 30-32 are rejected under 35 U.S.C. 102(b) as being anticipated by Thompson et al. (US 4,203,509).

As applied to claims 14-16, Thompson et al. teach an aircraft roller system (col. 1, line 6) comprising:

- (a) a single piece cylindrical body (17, Fig. 1), said body having a length and a diameter; and
- (b) an aperture extending longitudinally along and through the center of said body, wherein said body consists essentially of a polymer (col. 2, lines 12-15 and col. 3, lines 21-30, "super-tough nylon").

As applied to claim 18, Thompson et al. teach that the ends of the roller (10) are shaped to provide a shoulder (the area where element 18 encroaches into element 17, Fig. 1).

As applied to claims 19-22, Thompson et al. teach the invention cited including the physical properties of the polymeric material.

Regarding the limitations "impact strength of at least 0.5 (ft. lbs./inch)", "flexural strength of at least 20 psi", "compressibility strength of at least 20 psi and 200 psi", it is noted that Thompson et al. inherently teaches these physical properties. Thompson et al. teach that the polymer used in the roller is made from "nylon" (see col. 2, lines 12-15 and col. 3, lines 21-30). On page 5, second full paragraph of applicant's specification, applicant describes that suitable polymers include nylon among with other polymers. Therefore, since both the prior art and the applicant uses "nylon", it is inherent that Thompson et al. inherently teaches the claimed physical properties of the polymer. Applicant has not provided the physical properties of each of the polymer materials described in the specification at page 5, second full paragraph, therefore, it is understood that all of the described polymer materials on page 5, second full paragraph of applicant's specification meet the claimed "impact strength of at least 0.5 (ft. lbs.)/inch, a flexural strength of at least 20 psi, and a compressibility strength of at least 20 psi & 200 psi", with "nylon" as taught by Thompson et al. being among the polymer materials. Therefore, Thompson et al. also inherently teach the limitations of claims 19-22.

As applied to claims 23-25, Thompson et al. teach the invention cited including the claimed ranges for the length and diameter for the body of the roller (col. 3, lines 15-19).

As applied to claim 27, Thompson et al. teach the invention cited including the roller used in an aircraft conveyor system (use in multiple to establish a light-weight high-strength roller floor for cargo-carrying aircraft, col. 1, lines 4-6).

Art Unit: 3726

As applied to claims 30-32, note that the Applicant is claiming a product in a product-by-process claim (a roller made by steps a-c) and as such, the patentability of product does not depend on its method of production. *In re Thorpe*, 777 F.2d 695, 697, 227 USPQ 964, 966 (Fed. Cir. 1985) (citing In re Pilkington, 411 F.2d 1345, 1348, 162 USPQ 145, 147 (CCPA 1969)). If a product in a product-by-process claim is the same as or obvious from a product in the prior art, the claim is unpatentable even though the prior product is made by a different process. Id. citing *In re Marosi*, 710 F.2d 799, 803, 218 USPQ 289, 292-93 (Fed. Cir. 1983); *Johnson & Johnson v. W.L. Gore*, 436 F. Supp. 704, 726, 195 USPQ 487, 506 (D. Del. 1977); see also *In re Fessmann*, 489 F.2d 742, 744, 180 USPQ 324, 326 (CCPA 1974).

The instant invention is not directed to a method of making the roller, but to the roller itself which is a product. The final product is structurally the same as Thompson et al. as discussed in rejection of claims 14 and 16, above.

# Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 17, 26 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thompson et al. (US 4,203,509).

As applied to claim 17, Thompson et al. teach the invention cited with the exception of using the claimed acetyl copolymer.

Page 6

At the time of the invention, it would have been an obvious matter of design choice to a person of ordinary skill in the art, to have used the claimed polymer because applicant has not disclosed that the claimed polymers provides an advantage, is used for a particular purpose, or solves a stated problem. One of ordinary skill in the art, furthermore, would have expected applicant's invention to perform equally as well with the nylon polymer taught by Thompson et al. or acetyl copolymer as claimed, because either type of polymer perform the same function of providing a roller surface that has the desired compressibility and strength. Furthermore, in applicant's specification, at page 5, lines 8-13, there is a listing of different polymers and all are suitable for the rollers. There is no indication that one polymer is better than another.

As applied to claim 26, Thompson et al. teach the invention cited with the exception of the claimed length of the roller body.

At the time of the invention, it would have been an obvious matter of design choice to a person of ordinary skill in the art, to have used the claimed length for the roller body because applicant has not disclosed that the claimed length provides an advantage, is used for a particular purpose, or solves a stated problem. One of ordinary skill in the art, furthermore, would have expected applicant's invention to perform equally as well with the roller body length taught by Thompson et al. or roller body length as claimed, because either length of the roller body performs the same function of providing a desired roller surface for holding and carrying loads. Furthermore, in

Art Unit: 3726

applicant's specification, at page 4, lines 17-21, there is a listing of different lengths suitable for the rollers. There is no indication that one certain length is better than another.

As applied to claim 33, note that the Applicant is claiming a product in a product-by-process claim (a roller made of acetyl copolymer made by steps a-c of claim 30) and as such, the patentability of product does not depend on its method of production. *In re Thorpe*, 777 F.2d 695, 697, 227 USPQ 964, 966 (Fed. Cir. 1985) (citing In re Pilkington, 411 F.2d 1345, 1348, 162 USPQ 145, 147 (CCPA 1969)). If a product in a product-by-process claim is the same as or obvious from a product in the prior art, the claim is unpatentable even though the prior product is made by a different process. Id. citing *In re Marosi*, 710 F.2d 799, 803, 218 USPQ 289, 292-93 (Fed. Cir. 1983); *Johnson & Johnson v. W.L. Gore*, 436 F. Supp. 704, 726, 195 USPQ 487, 506 (D. Del. 1977); see also *In re Fessmann*, 489 F.2d 742, 744, 180 USPQ 324, 326 (CCPA 1974).

The instant invention is not directed to a method of making the roller, but to the roller itself which is a product. The final product is structurally the same as Thompson et al. as discussed in rejection of claim 17, above.

## Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
